

Arriving late after sunbathing by the river, the Small Yellow Sally rushed over with their lounging sunbed.

They gifted Dr. Critter a polished riverbed rock (maybe a last-minute find) before munching on algae and spending the evening happily chatting away with their good buddy, the Great Diving Beetle.

Closing their cozy cafe early, the 7-Spotted Ladybug arrived at Dr. Critter's birthday party in style, wearing a special leaf hat from the Common Blue Butterfly.

The gentle guest gifted Dr. Critter a daisy umbrella before happily relaxing on a warm rock, watching friends dance until bedtime.

Marching in right on time, the Hairy Wood Ant arrived in their work boots after a busy day building anthills. They gifted Dr. Critter a sturdy pine-needle hard hat (but it might not fit Dr. Critter's head). After fueling up on a crunchy honeydew snack, the tireless ant spent the night helping set up party games, lifting heavy decorations with ease, and keeping every bug's spirits high.

Arriving an hour early in a matching tie with their best friend, the Silverfish, the excited Common Fly introduced their buddy to everyone and played every party game. They gifted Dr. Critter a slightly rotten apple, which the host sneakily tossed away when no one was looking.

Excited for Dr. Critter's big birthday, the Common Blue Butterfly fluttered in with their bright blue shimmering wings. They proudly gifted Dr. Critter a lovely, fresh flower. After sipping a few sweet drops of wildflower nectar, the butterfly spent the rest of the evening dancing in the warm breeze, filling the air with colorful, fluttering cheer.

Bursting with excitement, the Elephant Hawk Moth zoomed through Dr. Critter's party, buzzing greetings while bringing sweet honeysuckle nectar to share.

They stole the show during charades by using their hovering skills to mimic their favorite animal, a hummingbird. As night fell, this nocturnal bug used their night vision to keep the celebration going strong well into the dark.

Zippering straight to the party after work in their shiny wetsuit, the Great Diving Beetle gifted Dr. Critter a fossil from a sea adventure, antenna-crossed that he'd love it. After eating little fish and swapping funny stories with the Small Yellow Sally, they headed home early to rest up for a dawn sea swim.

Overcoming their shyness, the Silverfish bravely attended the party wearing a slightly stained red tie. They gifted Dr. Critter their favorite treat, a single carefully chosen oat, before spending the night chatting with their best friend, the Common Fly. They read a book and sneakily took a bite out of a page when no one was looking.

Hopping in just after the party started, the friendly Large Marsh Grasshopper quickly made new friends with their big, bubbly personality. After munching on tasty leaves with everyone, they played a lovely sunset birthday song for Dr. Critter that was so beautiful, it brought a sweet tear to the host's eye.

AMAZING **Hairy Wood Ant**

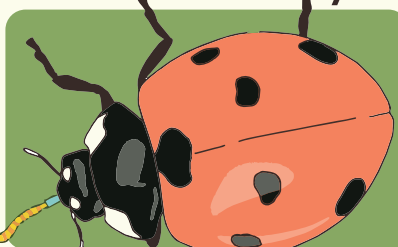

Formica lugubris

AGE	workers live for months	★
DIET	honeydew from aphids	★★
ADDRESS	In the woods	★★★

Funfact
Their queens responsible for laying eggs and creating new colonies – can live for more than 10 years. →

LEGENDARY **Ladybird**

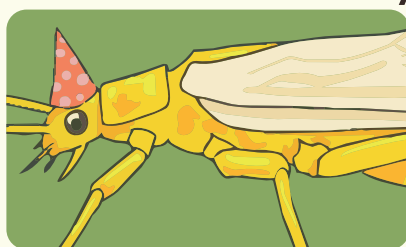

C. Septempunctata

AGE	1 year	★
DIET	Aphids	★★
ADDRESS	In the garden	★★★

Funfact
Can eat an incredible amount of food every day. Sometimes up to 50 aphids a day. →

STRIKING **Small Yellow Sally**

Siphonoparla torrentium

AGE	1 year	★
DIET	algae, aquatic insects	★★
ADDRESS	By the pond	★★★

Funfact
Is often seen skittering on rocks or dancing over the water. →

MEGA **Elephant Hawk Moth**

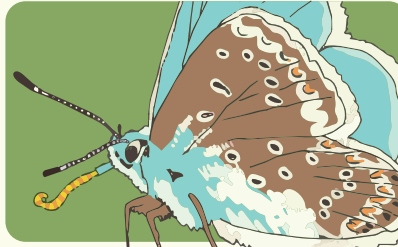

Deilephila elpenor

AGE	1 year	★
DIET	Honeysuckle nectar	★★
ADDRESS	In the garden	★★★

Funfact
Adult moths do not eat solid food. They only consume liquids. →

BOLD **Common Blue**

Polyommatus icarus

AGE	3 Weeks	★
DIET	Flower nectar	★★
ADDRESS	In the garden	★★★

Funfact
It's larvae offer nutrients in exchange for protection to ants. They must be friends. →

FABULOUS **Common fly**

Muscidae

AGE	15–30 days	★
DIET	Rotten food	★★
ADDRESS	In the kitchen	★★★

Funfact
Flies have many cousins. There are up to 120,000 species of fly. →

LOVELY **Large Marsh Grasshopper**

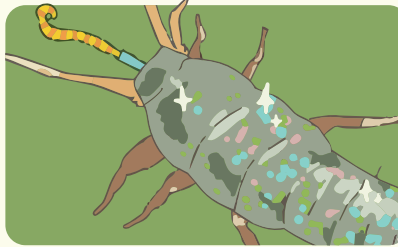

Stethophyma grossum

AGE	1 year	★
DIET	Wetland plants, Grass	★★
ADDRESS	In the marsh	★★★

Funfact
They sing differently than other grasshoppers. They use their back leg to kick the tip of their wing. →

SHINY **Silverfish**

Lepisma saccharinum

AGE	2–8 years	★
DIET	Oats, Books, Cotton	★★
ADDRESS	In the sink	★★★

Funfact
Silverfish have been around for over 400 million years. Earlier than the dinosaurs. →

GIDDY **Great Diving Beetle**

Dytiscus marginalis

AGE	2 year	★
DIET	Tadpoles, Aquatic Snails	★★
ADDRESS	Inside the pond	★★★

Funfact
They can bring a tiny air bubble along for their dive. →
